Stowman DS

Benefits

Maximum Capacity Utilization

Safe Sailing

Efficiency of Operations

Collaboration of Teams

BALANCING OPTIMIZED VESSEL UTILIZATION WITH SAFE SAILING

With the ever increasing complexity in the seaborne trade it is of utmost importance for vessel operators to find a balance between maximum capacity utilization and safe vessel operations. With the Navis Stowage Planning solution operators are able to save time and costs by providing a fully integrated tool for more efficient and flexible operations to central planner teams and their global collaboration inside their organization. It has been set up to help ship operators focus on dynamic, efficient and profitable operations while providing for the safest sailing possible for their vessels in all situations.

Getting ready for sharing relevant information in the Navis Cargo Ecosystem

Features

Stowman DS offers highly accurate and flexible stowage planning with multi-port views for voyage planning, condition and checks for on board and load list cargo. The solution is enabled to integrate stowage optimization and to analyze business intelligence data. Stowman DS is minimizing incident risks by automatically taking into account loading computer operational data like most up-to-date approved lashing calculations, stability and stress, DG segregation, tank situation and trim already in the planning stage. It offers advanced planning functionality like e.g. restows and shift moves, crane split and advanced crane operation functionality to minimize cargo operation times in port and is saving time and reducing costs by managing up-to-date ship profiles flexibly through the Vessel Pool. It allows an easy and fast distribution of workload across various planners and teams and is increasing visibility across stakeholders and various workstations. It provides full visibility for the assigned responsible voyages to every user and offers an im- and export function of standardized cargo data formats that are also used by terminals, agencies and partner liners.

EVERY MOVE MATTERS

Kaleris is the leading provider of cloud-based supply chain execution and visibility technology solutions. Many of the world's largest brands rely on Kaleris for mission-critical logistics technology in yard management, transportation management, and maintenance & repair operations as well as terminal operating systems and ocean carrier & vessel solutions from our premier Navis brand. By consolidating supply chain execution software assets across major nodes and modes into a central Execution & Visibility Platform, we solve for the dark spots and data gaps that cause friction and inefficiency in the global supply chain. Kaleris serves and supports customers in 80 countries.info, reach us at marketing@kaleris.com
