

## Real-Time Insights for Smarter Logistics Management

The Kaleris Truck Transportation Management System offers an integrated electronic logging device designed to improve logistics management through automation and visibility.

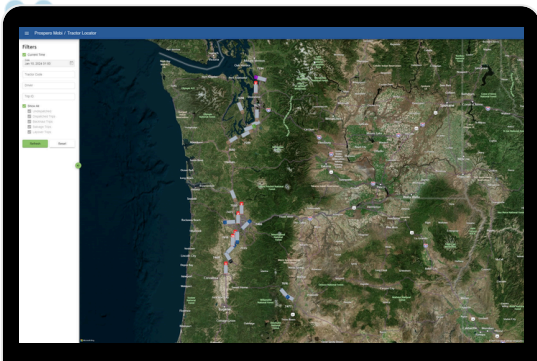

### Kaleris ELD: Keep your fleet on the move.

Kaleris ELD is an integrated electronic logging device (ELD) solution that enhances operational efficiency by merging with Kaleris TMS for Fleet Owners, reducing manual data entry, and ensuring compliance with regulations. It caters to various fleet types and operational needs, offering features like driver activity tracking and delay reporting

### Kaleris ELD: Key Benefits

-  **Integrated ELD Solution:** Kaleris ELD is an electronic logging device (ELD) integrated with Kaleris TMS for Fleet Owners, merging various systems into one seamless application. This integration eliminates the need for separate ELD projects and ensures accurate data flow.
-  **Operational Efficiency:** The system minimizes manual data entry and increases data accuracy, significantly reducing the workload for payroll clerks and improving the reliability of arrival and departure times.
-  **Versatility and Compliance:** Kaleris ELD supports various operational needs, including driver activities, delay information, and compliance with hours of service and other regulations. It is adaptable to different fleet types and operational requirements.
-  **Regulatory Compliance:** The Electronic Logging Device (ELD) integration ensures compliance with DOT regulations and tracks driver hours & miles driven in each state for fuel tax remittance.
