

KALERIS

Transportation Management for Fleet Owners

Real-Time Insights for Smarter Logistics Management

CAMS Prospero, now recognized as Kaleris TMS, is designed to optimize delivery routes, manage dispatch, calculate driver payroll, and ensure compliance for companies managing their own fleets.

Flexible and configurable while robust and fully supported.

This platform leverages existing investments by integrating with logistical packages from leading vendors. This product provides dynamic multisite route optimization, driver dispatch board, and hourly & activity-based driver payroll.

Key Benefits Include:

Cost Savings: Decrease the number of trips & stops while saving on fuel & operational costs with optimized routing, which factors in penalties for miles driven, early/late arrivals, layovers, and capacity constraints.

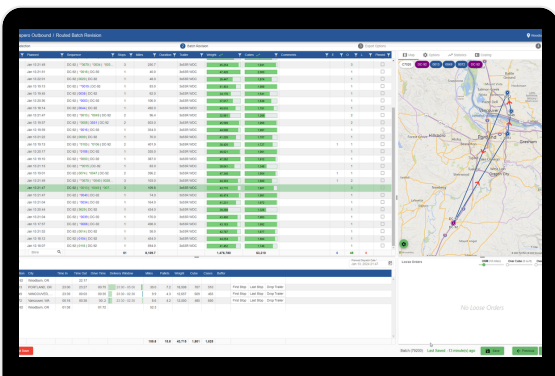

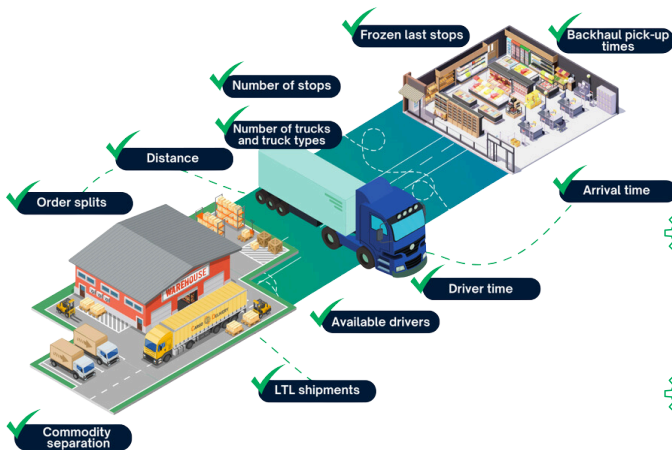

Operational Efficiency: Streamline dispatch and driver management with the dispatch board, designed to display all trips and allow dispatchers to assign drivers, tractors, and trailers. The board provides real-time updates and highlights potential delays.

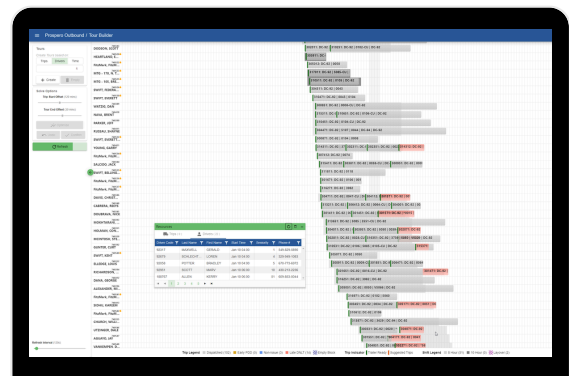

Scalability: This product is suitable for large private fleets with complex routing and payroll needs.

Backhaul Optimization: Rank the optimum pickup window to maximize profit and minimize risk by knowing the probabilities for a successful pickup in advance.
